

## **20 years of innovation** **inomed Medizintechnik GmbH celebrates its birthday**

The inomed Medizintechnik GmbH celebrates a grand anniversary this year. On the 11.11.2011 the innovative company with its headquarter in Emmendingen turned 20 years old, and looks back on two extremely successful decades. In the future, the company will remain true to its innovative philosophy and will create new milestones by investing in research and new developments in its business areas Intraoperative Neuromonitoring, Functional Neurosurgery, Pain Treatment and Neurological Diagnostics.

Even the German chancellor Angela Merkel was impressed by inomed's power of innovation. Last year she visited inomed's booth at the Medica in Düsseldorf, one of the largest medical fairs of the world, and pointed out the special meaning of the new developments of the medical technology out.

### **From two-man business to a worldwide company**

inomed was founded in 1991 in Teningen by CEO Rudi Mattmüller and plant manager Dieter Mussler. The company generates a turnover of more than 10 Million Euros a year. A significant part of it is reinvested in research and development programs. 2010 the company moved to new facilities in Emmendingen. The modern new home offers space for inspiration and trend-setting high-tech developments. This also leads the way to new international markets. Meanwhile, inomed has over 100 employees and distributes its products worldwide.

### **Innovative tradition**

1991 inomed started with the development of stimulation probes for the identification and safety of facial nerves.

Thus facial nerve paresis can be avoided and facial expressions is preserved in difficult surgical interventions in ENT and neurosurgery. Intraoperative facial nerve monitoring is an important adjunct to enhance facial nerve preservation, particularly when tumor, infection, or anatomic variations place the nerve at an increased risk.

Already in 1995 inomed led the way to the successful next decades. Together with surgeons, inomed has developed pioneering methods for recurrent nerve monitoring and is market leader in thyroid surgery in Germany.

In Germany alone there are more than 100.000 thyroid surgeries a year.

Further successful research projects and product developments in neuromonitoring and also in new areas as functional neurosurgery, pain treatment and neurological diagnostics enabled inomed to be successful worldwide.

inomed shares its competence and knowledge and offers international trainings and courses for surgeons, physiologists and technical assistants. Distributors, users and surgeons can profit from the professional Know-how of the competent inomed employees.

On Medica 2011 in Düsseldorf you can find inomed in hall 9, at booth no. B73.
