

25 years with our fingers on the pulse inomed celebrates its 25th anniversary

The company inomed Medizintechnik GmbH with its headquarters in Emmendingen celebrates its 25th anniversary on 11.11.2016, and can look back on a successful history developing innovative products in the area of neurology.

inomed Medizintechnik GmbH was founded in Teningen in 1991 by its current Managing Director Rudi Mattmüller and Operations Manager Dieter Mussler. As pioneers in the area of neurological monitoring, in 1992 inomed successfully introduced onto the German market the first nerve monitors in the ENT area for monitoring facial nerves. Gradually other new applications were served by this neuro-physiological monitoring technology, and the technique came to be used in various different specialist disciplines requiring functional monitoring of nerves through neuro-monitoring.

Development into a global medical technology company

In association with national and international research partners, and also directly with doctors, inomed develops medical products which are produced at its headquarters in Emmendingen for sales worldwide. More than 500,000 people already benefit from the use of inomed products every year.

To date a worldwide sales network has been built up and expanded with trained specialist stockists in over 80 countries. In Germany, France and Switzerland, as well as Norway, Sweden and Denmark. inomed has its own direct sales representatives in the market place, and today employs over 160 employees at its Emmendingen site. The first branches were set up in Poland, the UK and the USA.

Fellowship Programme providing training and qualifications for specialist staff

In its affiliated Arkana seminar centre, inomed continuously runs qualified courses for specialist clinical staff to ensure that the technology is used to the benefit of doctors and patients. For its 25th anniversary celebrations, inomed is also sponsoring a programme at ISIN (International Society of intraoperative Neurophysiology), supporting the next generation of specialists with funding of 10,000 Euros.

More room for further growth

In its 2016 anniversary year, inomed has acquired an extension to buildings on the Emmendingen site which expands the surface area of the modern company building erected in 2010 to 4,600 m² in total. Enough space to accommodate all departments of the business, including the seminar centre and a restaurant. This expansion had become necessary due to the strong growth of the company over the past few years.

Looking back and into the future

The company's anniversary will be suitably celebrated with festivities on 11.11.2016. Employees and invited guests will be taken on a musical journey remembering the success stories and milestones of the firm's history, and at the same time looking forward to the future.

"The company will continue to develop in three ways," predicts Managing Director Rudi Mattmüller, "on the one hand, by opening up new markets, and also by extending the spectrum of applications and new products which will be developed in our various research cooperation agreements." The latest example of this is the monitoring of autonomic nerves during surgical interventions in the minor pelvis. Today this enables surgeons significantly to reduce the risk of bladder function problems, bowel incontinence and disorders in sexual function.
